

# PYRO-SAFE®

## Flammotect double layer

### Installation instructions

Mixed penetration sealing system made of mineral fibre boards and an ablative coating for electrical cables and lines of all types, electrical installation conduits, combustible/non-combustible pipes and other services.

Fire resistance class maximum EI 120 in accordance with EN 13501-2 and ETA-14/0418.

# PYRO-SAFE® Flammotect double layer

## 1. Preliminary remarks / Overview

### 1.1 Target group

- The installation instructions are intended solely for personnel trained in fire protection.

### 1.2 Use of the instructions

- Read through these installation instructions entirely before beginning work. Pay particular attention to the following safety instructions.
- The authorisation holder assumes no liability for damage caused by failure to comply with these instructions.
- Figures appear as examples only. Installation results may differ in appearance.
- Unless otherwise indicated, all lengths are in millimeters
- All information in this document corresponds to the current state of the art or the valid standard version at the time of preparation. Upon request, svt will gladly provide the relevant statutory and technical framework conditions or manufacturer's specifications for each individual case.
- © Copyright svt Unternehmensgruppe, Gluesinger Strasse 86 Seevetal Germany
- PYRO-SAFE® is a registered trademark of the svt group.

### 1.3 Safety instructions

- The safety data sheets must be used for advice when processing the fire protection compounds.
- Personal protective equipment:

	Wear protective clothing and non-slip shoes.
	Use protective goggles, wrap-around glasses.
	<p>In case of short-term or low-level exposure: P2 particle filter.</p> <p>In case of intensive or long-term exposure: use self-contained breathing apparatus.</p> <p>Only use respirators that comply with international/national standards.</p>
	<p>Use chemicals-resistant protective gloves.</p> <p>Recommended material: butyl rubber, nitrile rubber, fluoro rubber, PVC.</p>

#### Safety instructions for the installation of floor penetration seals

	The area below the floor penetration seal must be cordoned off while work on the penetration seal is underway (warning tape, or sign: danger - falling objects; keep off this area; sealing work underway in the floor above!)
	The company that is commissioned to install the floor penetration seals shall provide the client with written information (to be passed on to the owner or his authorised representative), pointing out that fire-resistant penetration seals in floors must be provided on site with adequate protection (e.g. barriers), or covered with grating to prevent them from being walked on after installation.

## PYRO-SAFE® Flammotect double layer

### 1.4 Scope

The PYRO-SAFE® Flammotect double layer mixed penetration sealing system in wall and floor openings is assessed and evaluated in accordance with ETAG 026-2 regarding the features „Reaction to fire“, „Fire resistance“, „Release of dangerous substances“ and „Durability and serviceability“

#### Reaction to fire

The ablative component „PYRO-SAFE® FLAMMOTECT-A“ is classified as E in accordance with EN 13501-1; the intumescent material „PYRO-SAFE® DG-CR“ is classified as C-s1, d0 in accordance with EN 13501-1; the mineral fibre boards „Hardrock 040“ and the mineral fibre mats „Klimarock“ are classified as A1; the pipe sleeves „ProRox PS 960“ are classified as A2-s1,d0 in accordance with EN 13501-1..

#### Fire resistance

„PYRO-SAFE® Flammotect double layer“ complies with requirements of max class EI 120 in accordance with EN 13501-2. The pipe end configuration -U/U covers also all other possible endings (C/U, U/C and C/C) in accordance with EN 13501-2. The pipe end configuration -U/C also covers the configuration -C/C in accordance with EN 13501-2. The -U/C configuration is also valid for -C/U and -C/C in accordance with EN 13501-2. When installed in walls or floors with a lower fire resistance duration, the fire resistance duration of the penetration seal is also reduced to that of the fire resistance class of the wall or floor.

#### Release of dangerous substances

None

#### Durability and serviceability

The ablative „PYRO-SAFE® FLAMMOTECT-A“ component and the intumescent material „PYRO-SAFE® DG-CR“ fulfill the type X in accordance with EOTA TR 024. The PYRO-SAFE® Flammotect - double layer system can be subjected to the conditions of inside rooms with and without exposure to moisture or atmospheric conditions, without substantial changes to the fire protection characteristics being expected.

## PYRO-SAFE® Flammotect double layer

### 1.5 Structural elements

#### Plasterboard walls with steel frame

In studworks and double-sided lining with at least 2 layers of 12.5 mm thick cement or gypsum-based building slabs with a fire performance of Class A1 or A2 in accordance with EN 13501-1.

The wall structure shall be complemented by additional wall struts and bars to form the edge of the opening.

The walls must be classified with the required fire resistance rating in accordance with EN 13501-2.

#### Plasterboard walls with wood frame

In studworks and double-sided lining with at least 2 layers of 12.5 mm thick cement or gypsum-based building slabs with a fire performance of Class A1 or A2 in accordance with EN 13501-1.

The distance from the opening to the struts and bars shall be  $\geq 100$  mm and the hollow spaces between the linings of the wall, the struts and bars as well as the opening edge shall be stuffed down to a depth of  $\geq 100$  mm with mineral-wool, fire resistance Class A1 or A2 in accordance with EN 13501-1. The walls shall be classified with the required fire resistance rating in accordance with EN 13501-2.

#### Lining of opening edge for plasterboard

Alongside the opening edge, there shall be at least two layers of 12.5 mm thick concrete or gypsum based slabs with a fire reaction class A1 or A2 according to EN 13501-1.

#### Solid walls

Made of masonry, concrete, reinforced concrete or aerated concrete with a density of  $\geq 450$  kg/m<sup>3</sup>.

The walls shall be classified for the desired fire resistance time in accordance with EN 13501-2.

#### Solid floors

of concrete, reinforced concrete or cellular concrete with a density of  $\geq 550$  kg/m<sup>3</sup>.

The walls must be correspondingly rated for the required fire resistance rating in accordance with EN 13501-2.

## PYRO-SAFE® Flammotect double layer

### 1.7 Field of application (Dimensions)

Dimensions			
Item.	Name	Wall [mm]	Floor [mm]
A	Thickness of structural element	≥ 100	≥ 150
B	Thickness of penetration seal	≥ 120	≥ 150
C	Maximum dimensions of the opening (width x height)	1.400 x 2.000	1.400 x 2.000
D	Distance from other openings or installations	≥ 200	≥ 200
E	Reduced distance from neighbouring openings for penetration seals, if both openings are ≤ 400 mm x 400 mm	≥ 100	≥ 100

The total allowable cross section of the installations (Outer dimensions) is ≤ 60% of the construction opening!

≤ 160	2,4 - 11,9	≤ 160	3,0 - 9,1	≤ 160	3,0 - 9,5	

## PYRO-SAFE® Flammotect double layer

### 2.3 Multilayer pipes „HENCO pipes“

	Multilayer pipes „HENCO pipes“	
	Pipes in a multi-layered network and cross-linked PE (PE-Xc/Al/PE Xc) by HENCO with an outside-Ø ≤ 63.0 mm	
	Without PE foam insulation	
	Outside pipe-Ø [mm]	Wall thickness [mm]
	≤ 12	1,6
	≤ 32	3,0
	≤ 63	4,5
	With PE foam insulation	
	Outside pipe-Ø [mm]	Wall thickness [mm]
	≤ 14	2,0
	≤ 32	3,0

### 2.4 Non-combustible pipes

	Non-combustible pipes Pipes made of copper, steel, stainless steel or cast iron		Wall thickness [mm]
	Outside-Ø [mm]	Min. / max.	
Pipe material / insulation			
Copper with non-combustible insulation made of mineral fibre, e.g. „Klimarock“	≤ 108,0	0,8 - 2,5	
Steel, stainless steel, cast iron with non-combustible insulation made of mineral fibre, e.g. „Klimarock“	≤ 323,9*	2,9 - 7,1	
Copper with non-combustible insulation made of mineral fibre "ProRox PS 960"	≤ 88,9	1,0 - 2,0	
Steel, stainless steel, cast iron with non-combustible insulation made of mineral fibre "ProRox PS 960"	≤ 170,0	3,0	
Copper with combustible insulation „Armaflex Protect“	≤ 88,9	1,0 - 2,0	
Copper with combustible insulation "NH/Armaflex"	≤ 108,0	0,8 - 2,9	
Copper with combustible insulation "Kaiflex ST"	≤ 88,9	1,0 - 2,0	
Steel, stainless steel, cast iron with combustible insulation "Armaflex Protect"		3,0	
Steel, stainless steel, cast iron with combustible insulation "NH/Armaflex"	≤ 170,0	2,9	
Steel, stainless steel, cast iron with combustible insulation "Kaiflex ST"		3,0	

\* In walls up to outside-Ø 170.0 mm

The penetration seal may also be used for pipes from other materials, whose heat transfer rate is lower than that of steel or copper with a melting point ≥ 1049°C

## PYRO-SAFE® Flammotect double layer

### 2.5 Further allowed services

	<b>HVAC split line combinations</b> E.g. „Tubolit DuoSplit“ or „Tubolit Split“ by Armacell or types with the same characteristics.
<b>Wall:</b>	Double (6-10/6-18 mm) or single copper pipe (6-22 mm) and pipe insulation of 9 mm thickness made of PE foam in accordance with EN14313 with optional accompanying lines (one plastic pipe made of PE-HD, up to outside Ø 25 mm and pipe wall thickness 1.8-3.5 mm and up to 3 sheathed lines with max. 5 cores à 1.5 mm, Ø ≤ 21 mm) without spacing.
<b>Floor:</b>	Double (6-22/8-22 mm) or single copper pipe (6-22 mm) and 9 mm thick PE foam pipe insulation in accordance with EN14313 with optional accompanying pipes (one plastic pipe (U/U) made of PE-HD, outer Ø 25 mm and pipe wall thickness 1.8-3.5 mm, in accordance with EN 1519-1, DIN 8074:2011, DIN 8075:2011 and 4 sheathed lines Ø ≤ 21 mm at zero distance).

	<b>Double solar pipes „NanoSUN“</b> Pipes for solar thermal applications made of corrugated stainless steel with insulation, an accessory line integrated in the insulation and a PVC sheath by Aktarus Group Srl Outside-Ø ≤ DN 40.

## PYRO-SAFE® Flammotect double layer

### 5. Regulations and variants

- The mixed penetration sealing system may be used to close openings without installations (so-called reserve penetration sealing system).
- Penetration sealing systems in floors must be protected against loads/walking on using suitable measures in the building.
- On installation in plasterboard walls, continuous reveal cladding is necessary.
- The penetration sealing system surface of mineral fibre boards and their edges, and 20 mm all around on the structural element must be provided with a coating of PYRO-SAFE® FLAMMOTECT-A with a dry film thickness of at least 1.0 mm.
- The fire protection measures described on the following pages also apply to retrofitting.

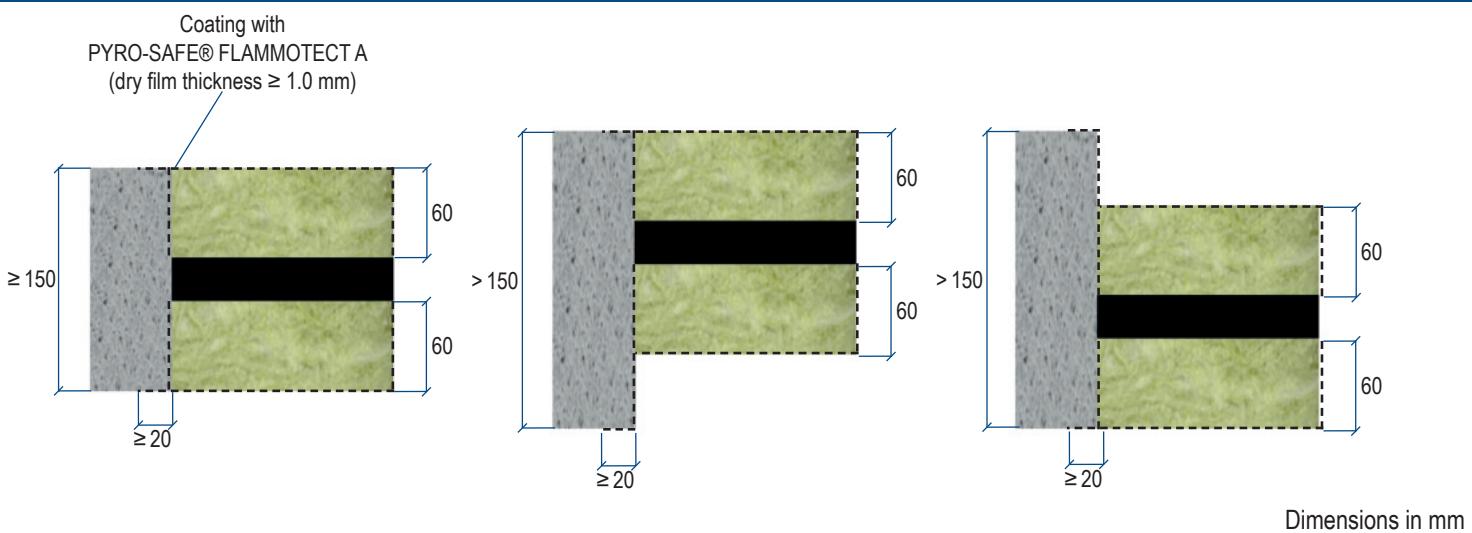

#### Variants in walls

Plasterboard wall or solid wall

Dimensions in mm

#### Variants in floors

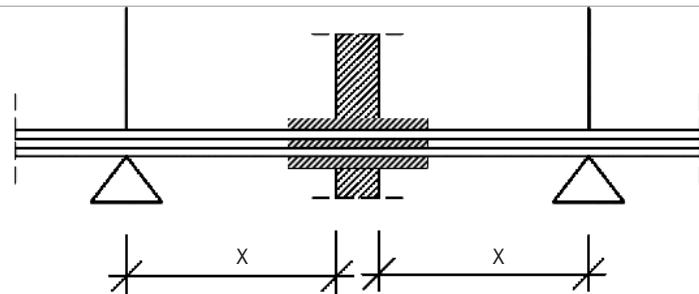

Dimensions in mm

## PYRO-SAFE® Flammotect double layer

### 5.1 Rules over the first cable/pipe support

- The first supports before the installation shall be made of non-combustible material (fire resistance class A1 or A2 in accordance with EN 13501-1); the supports shall be placed at a distance according to the table below.

Initial bracket (support) of the installations in front of the wall penetration sealing system made of steel or equivalent

#### First cable/pipe support

	Wall	
Cables, cable bundles, cable trays, control cables	≤ 500 mm	
	Floor	≤ 250 mm
Electrical installation conduits		≤ 500 mm
Combustible pipes		≤ 400 mm
Multilayer pipes "HENCO pipes"		≤ 550 mm
Non-combustible pipes – Insulation made of mineral fibre mats or sleeves		≤ 650 mm
Non-combustible pipes – insulation made of FEF		≤ 550 mm
Double solar pipes "NanoSUN®"		≤ 500 mm
PE lines "speed pipes" for glass fibre cables and micro cables		Spacing as per manufacturer's specifications
HVAC split-line combinations		≤ 500 mm

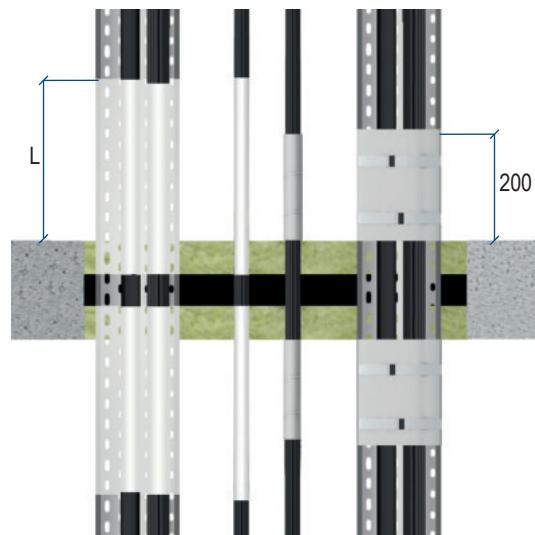

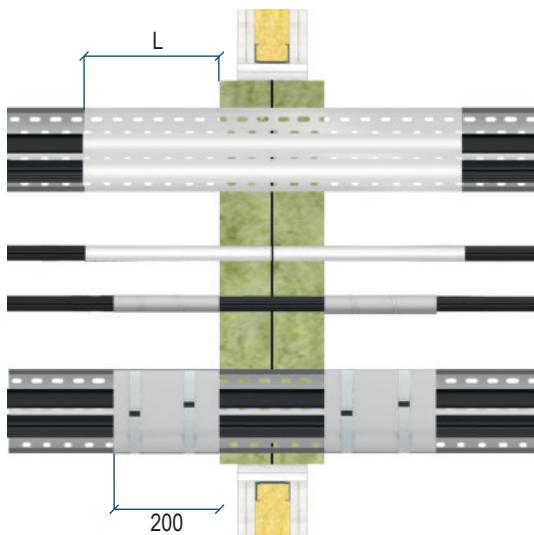

# PYRO-SAFE® Flammotect double layer

## 6. Fire protection measures

### 6.1 Cables / cable bundles / cable trays

- The passage of cables or cable bundles is allowed without and with cable trays.
- Cable bundles can be installed unopened through the penetration sealing system. If they consist of parallel-running cables that are densely packed and permanently bound, stitched or welded together they don't have to be filled inside with filler material.
- The support constructions of the cable trays must be designed in such a way that in the event of fire no additional mechanical stress can occur on the penetration sealing system.
- As an alternative to the coating, the passages can be wrapped with the fire protection wrap PYRO-SAFE® DG-CR 1.5.
- The fire protection wrap PYRO-SAFE® DG-CR 1.5 is coated on one side and equipped with a protective film. This must be removed before the wrap is fixed in position with the coated side pointing inwards and with steel wires.

#### Measures for sealing in walls and floors

Wall-/Floor-, seal thickness and implementation variants. See page 18

## PYRO-SAFE® Flammotect double layer

### 6.2 Electrical installation conduits, single or bundled

- Electrical installation conduits can be passed through both individually (up to  $\varnothing \leq 32$  mm) and in bundled form (up to  $\varnothing \leq 100$  mm with single pipes up to  $\varnothing \leq 32$  mm) with/without cable assignment up to  $\varnothing \leq 21$  mm.
- The electrical installation conduits must be wrapped on both sides with the fire protection wrap PYRO-SAFE® DG-CR 1.5.
- The fire protection wrap PYRO-SAFE® DG-CR 1.5 is coated on one side and equipped with a protective film. This must be removed before the wrap is fixed in position with the coated side pointing inwards and with steel wires.

Wall-/Floor-, seal thickness and implementation variants. See page 18

## PYRO-SAFE® Flammotect double layer

### 6.4 Combustible pipes

- Combustible pipes must be wrapped with the intumescent wrap PYRO-SAFE® DG-CR BS. For installations in walls, the wrap has to be arranged on both sides, in floors only one wrap is necessary.
- The penetration sealing may be used on pneumatic conveyors, compressed air lines and so on if the pipeline system is switched off in the event of a fire.

#### Measures for sealing in walls and floors

## PYRO-SAFE® Flammotect double layer

### 6.6 Non-combustible pipes - section insulation made of lamella mat „Klimarock“

- Depending on the pipe wall thickness and pipe outside diameter, an additional protective insulation consisting of mineral fibre mats may be necessary. The section insulation must be fixed in position on the pipe with tensioning straps or wire.
- On installation in floors, the insulation must be fixed in position using suitable measures to prevent it from slipping.

#### Measures for sealing in walls and floors

## PYRO-SAFE® Flammotect double layer

### 6.7 Non-combustible pipes – section insulation made of mineral fibre pipe sleeve „ProRox PS 960“

- „ProRox PS 960“ pipe sleeves with or without aluminium lamination may be used.
- The section insulation must be fixed in position on the pipe with tensioning straps or wire.
- If installed in floors, a protective insulation consisting of mineral fibre mats must be installed on the upper side.
- On installation in floors, the insulation must be fixed in position using suitable measures to prevent it from slipping.

#### Measures for sealing in walls and floors

## PYRO-SAFE® Flammotect double layer

### 6.8 Non-combustible pipes – section insulation made of FEF „NH/Armaflex“

- Section insulation consisting of FEF must be routed through the component opening to be sealed.
- The pipes must be wrapped with the fire protection wrap PYRO-SAFE® DG-CR 1.5.
- The fire protection wrap PYRO-SAFE® DG-CR 1.5 is coated on one side and equipped with a protective film. This must be removed before the wrap is fixed in position with the coated side pointing inwards and with steel wires.
- Protective insulation must additionally be installed; fixing in position must be ensured through suitable measures to prevent slipping.

#### Measures for sealing in walls and floors

Wall-/Floor-, seal thickness and implementation. See page 18

Protective insulation „Armaflex Protect“

## PYRO-SAFE® Flammotect double layer

### 6.10 Non-combustible pipes – section insulation consisting of FEF „Kaiflex ST“

- Section insulation consisting of FEF must be routed through the component opening to be sealed.
- The pipes must be wrapped on both sides with the fire protection wrap PYRO-SAFE® DG-CR 1.5.
- The fire protection wrap PYRO-SAFE® DG-CR 1.5 is coated on one side and equipped with a protective film. This must be removed before the wrap is fixed in position with the coated side pointing inwards and with steel wires.
- Depending on the pipe outer diameter, protective insulation consisting of FEF or mineral fibre mat „lamella mat“ may be necessary.
- The protective insulation must be installed at both ends; fixing in position must be ensured through suitable measures to prevent slipping.

#### Measures for sealing in walls and floors

Wall-/Floor-, seal thickness and implementation. See page 18

\* Additional protective insulation „Lamella mat“ ( $\geq$  250 mm x  $\geq$  30 mm) required.

# PYRO-SAFE® Flammotect double layer

## 7. Installation steps

### 7.1 For cable penetrations

1. Opening with installations passed through it

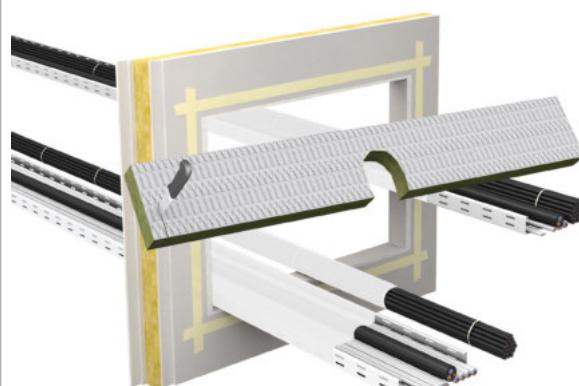

2. Clean the inside edges (reveal panelling must be present in the building)

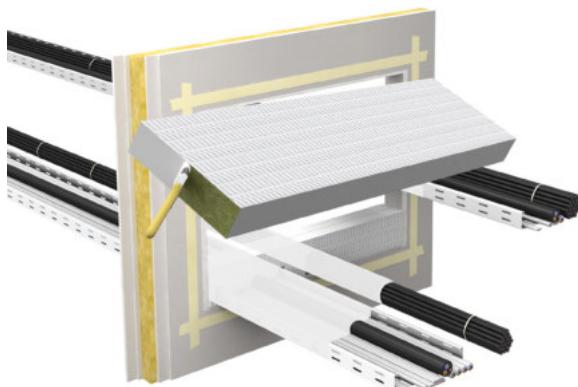

3. Mask the passage all around with masking tape 20 mm away from the edge. Coat the cables with PYRO-SAFE® FLAMMOTECT-A; alternatively, design with fire protection wrap.

4. Cut mineral fibre board to site (produce cut-outs for the installations).

5. Coat edges of the mineral fibre boards with PYRO-SAFE® FLAMMOTECT-A and firmly seat boards into position.

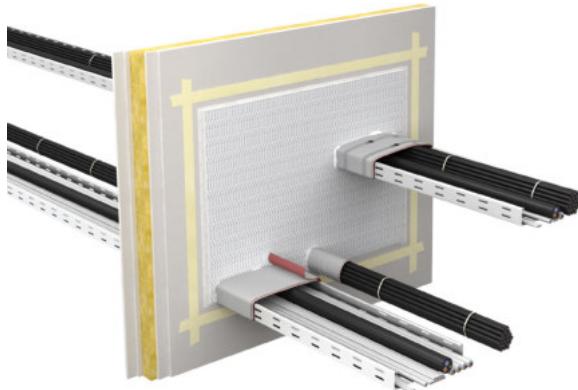

6. Seal residual opening/joint gaps with mineral fibre or fill with PYRO-SAFE® FLAMMOTECT-A.

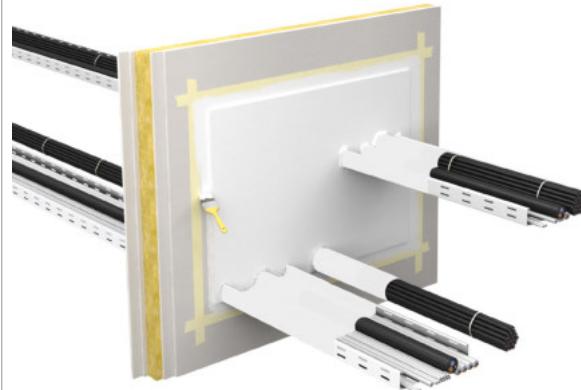

## PYRO-SAFE® Flammotect double layer

7. Alternative to cable coating: wrap cables, cable bundles, cable trays with PYRO-SAFE® DG-CR 1.5

8. Top coat with PYRO-SAFE® FLAMMOTECT-A.

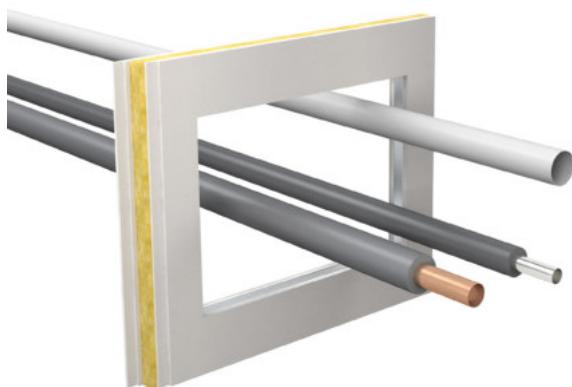

9. If required or mandatory, fill the identification label and apply it next to / above (not on!) the penetration seal for permanent marking.

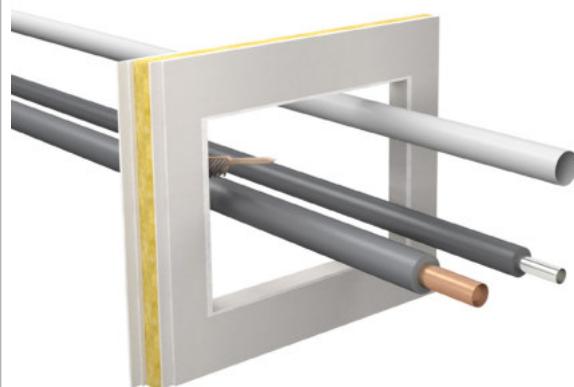

## PYRO-SAFE® Flammotect double layer

### 7.2 For pipe penetrations

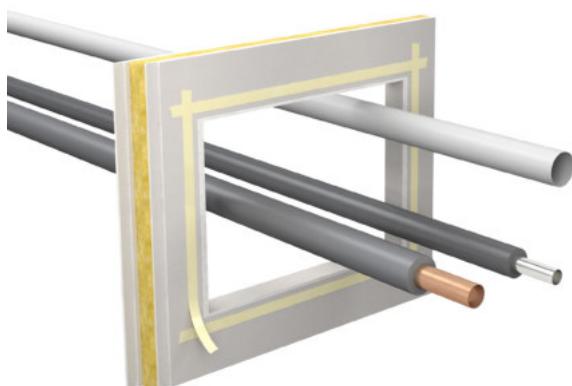

1. Opening with installations passed through it

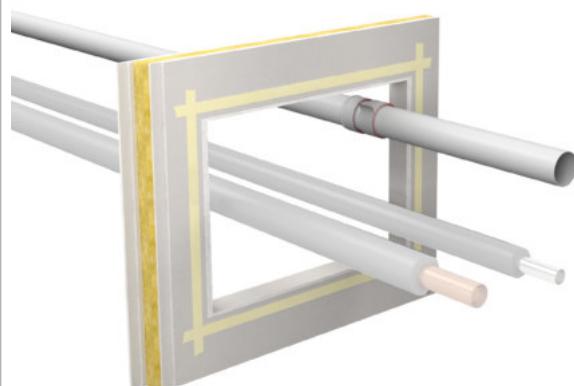

2. Clean the inside edges (reveal panelling must be present in the building)

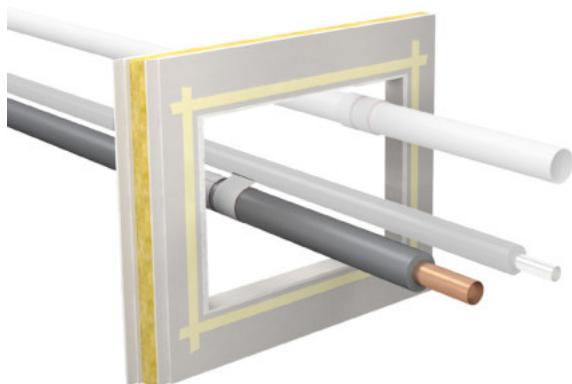

3. Mask the passage all around with masking tape 20 mm away from the edge. Coat the cables with PYRO-SAFE® FLAMMOTECT-A; alternatively, design with fire protection wrap.

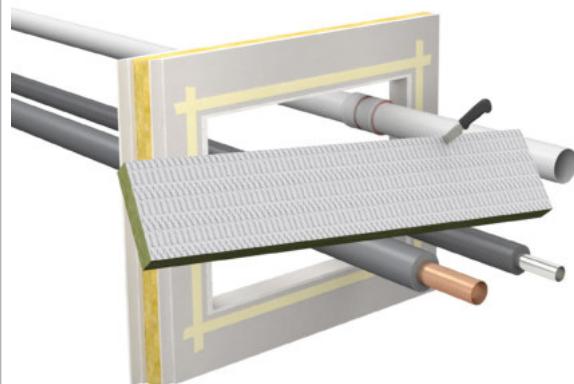

4. Wrap combustible pipes with PYRO-SAFE® DG-CR BS. See page 23.

4a. Wrap non-combustible pipes with combustible insulation with PYRO-SAFE® DG-CR 1.5. See page 27.

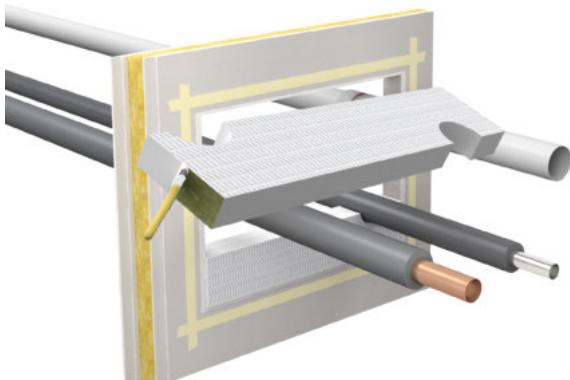

5. Cut mineral fibre boards to size (produce cut-outs for the passages).

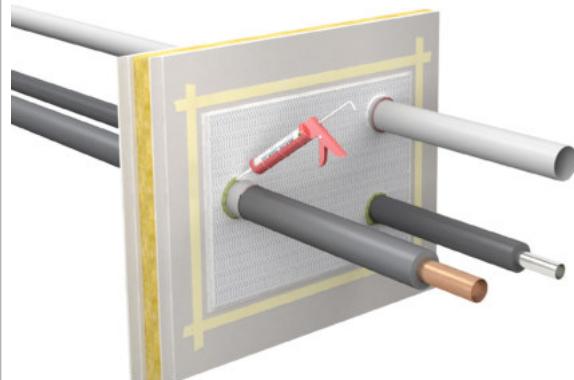

## PYRO-SAFE® Flammotect double layer

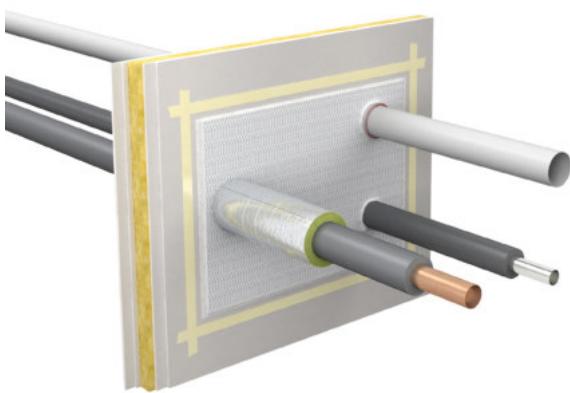

**6. Coat edges of the mineral fibre boards with PYRO-SAFE® FLAMMOTECT-A and firmly seat boards into position.**

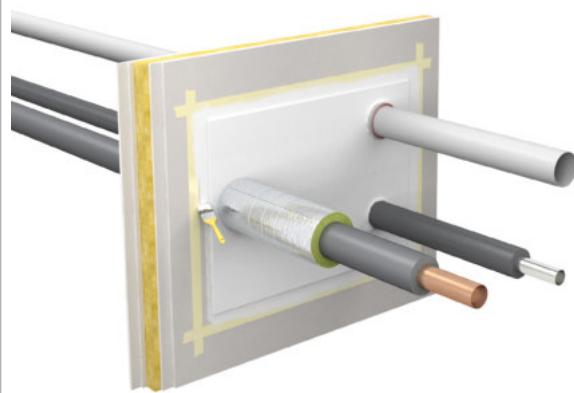

**7. Seal residual opening/joint gaps with mineral fibre or fill with PYRO-SAFE® FLAMMOTECT-A.**

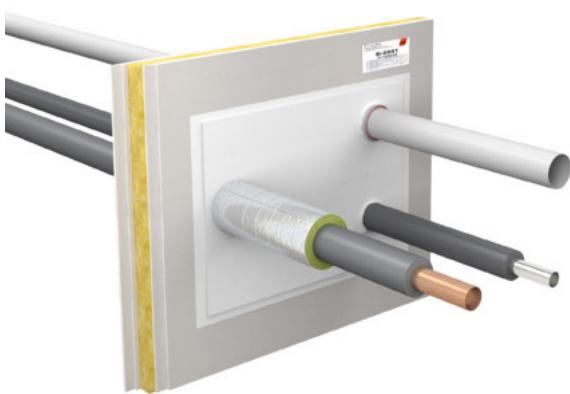

**8. If required, additionally provide pipes with protective insulation.**

**9. Top coat using PYRO-SAFE® FLAMMOTECT-A.**

**10. If required or mandatory, fill the identification label and apply it next to / above (not on!) the penetration seal for permanent marking.**

## PYRO-SAFE® Flammotect double layer

### 7.3 Combination penetration sealing system

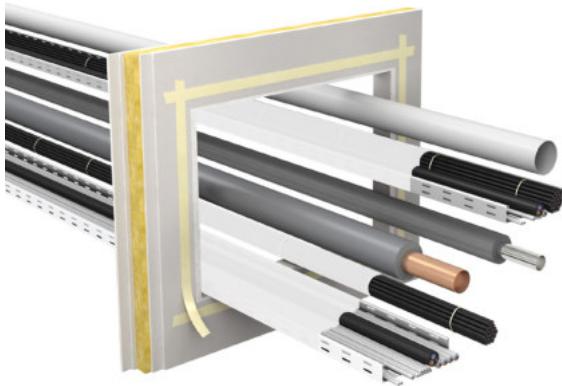

1. Opening with passages

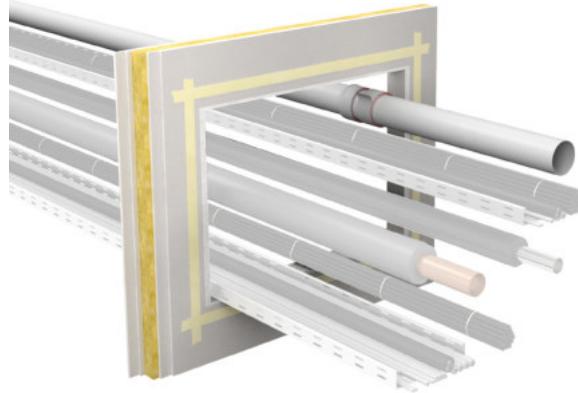

2. Clean the inside edges (reveal panelling must be present in the building).

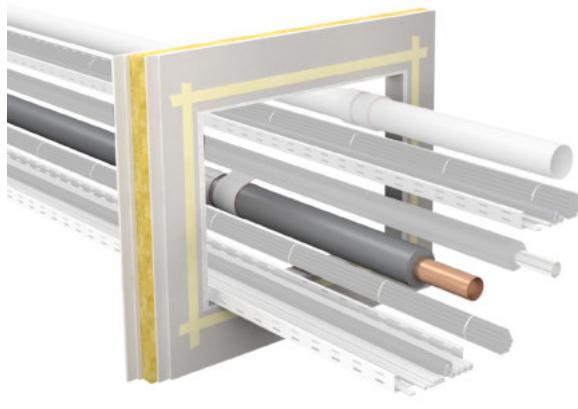

3. Mask the passage all around with masking tape 20 mm away from the edge. Coat the cables with PYRO-SAFE® FLAMMOTECT-A; alternatively, design with fire protection wrap.

4. Wrap combustible pipes with PYRO-SAFE® DG-CR BS. See page 23.

4a. Wrap non-combustible pipes with combustible insulation with PYRO-SAFE® DG-CR 1.5. See page 27.

5. Cut mineral fibre boards to size (produce cut-outs for the passages).

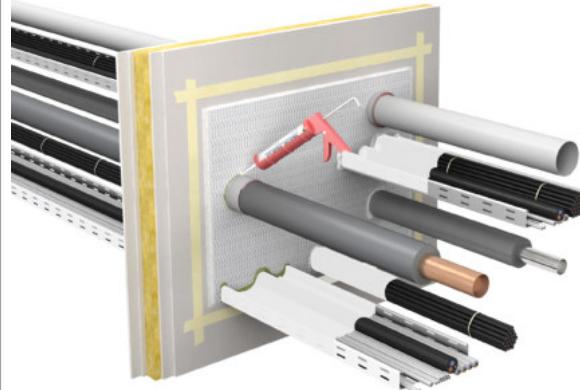

## PYRO-SAFE® Flammotect double layer

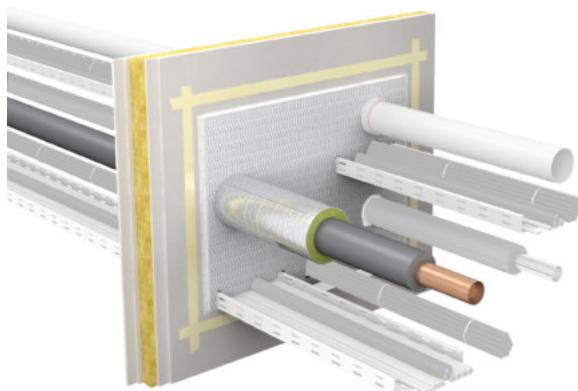

6. Coat edges of the mineral fibre boards using PYRO-SAFE® FLAMMOTECT-A and firmly seat boards.

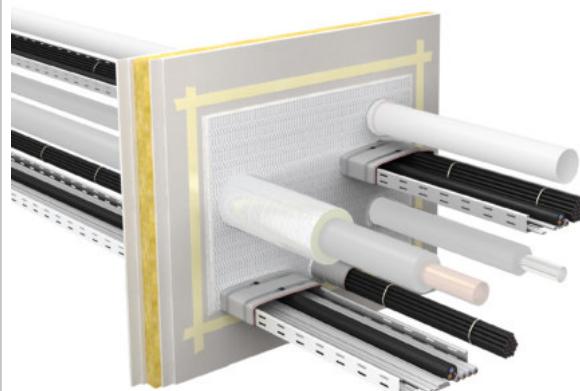

7. Seal residual opening/joint gaps with mineral fibre or fill with PYRO-SAFE® FLAMMOTECT-A.

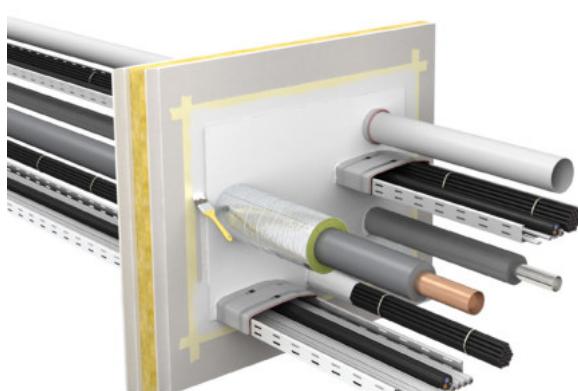

8. If necessary, additionally provide pipes with protective insulation „Lamella mat“.

9. Alternative to cable coating: wrap cables, cable bundles, cable trays with PYRO-SAFE® DG-CR 1.5.

10. Top coat using PYRO-SAFE® FLAMMOTECT-A.

11. If required or mandatory, fill the identification label and apply it next to / above (not on!) the penetration seal for permanent marking.

# Declaration of Performance

No. 01155-PYRO-SAFE-FLAMMOTECT-A

PYRO-SAFE® FLAMMOTECT-A

Date: 25.09.2018  
Rev.: 04  
Page 1 / 1

**Unique identification code of the product type**  
PYRO-SAFE® FLAMMOTECT-A

**Intended use**

- A) Ablative fire stopping product used in penetration seals
- B) Fire stopping product used for linear joint and gap sealing

**Manufacturer**

svt Brandschutz Vertriebsgesellschaft mbH International,  
Gluesinger Strasse 86, D - 21217 Seevetal

**System for assessing and verifying constancy of performance**

- A) + B) System 1

**European Assessment Document**

- A) ETAG 026-2:2011
- B) EAD 350141-00-1106

**European Technical Assessment**

- A) ETA-14/0418 dated 04.12.2014
- B) ETA-18/0237 dated 16.05.2018

**Certificate of constancy of performance**

- A) 0761-CPR-0426
- B) 0761-CPR-0726

**Technical Assessment Body**

- A) Deutsches Institut für Bautechnik (DIBt), Berlin
- B) ETA-Danmark A/S

**The notified body**

- A) + B) Civil Engineering Materials Testing Institute (MPA BS) in Braunschweig, code number 0761

**Declared performance**

	Essential characteristics	Performance	Harmonised technical specifications
A) + B)	Reaction to fire	Class E	EN 13501-1
A)	Fire resistance	Class EI 30 - Class EI 240 For details check ETA-14/0418	EN 13501-2
B)		Maximum Class EI 120-H-X-B-W-00 up to 200 Class EI 120-V-X-B-W-00 up to 200 for details check ETA-18/0237	
A)	Emission of dangerous substances	No dangerous substances	ETAG 018-2
A) + B)	Durability and serviceability	Use category type X	ETAG 026-2

The performance of the product identified above is in conformity with the set of declared performances.

This declaration of performance is issued, in accordance with Regulation (EU) No. 305/2011, under the sole responsibility of the manufacturer identified above. DoP online available at [www.svt.de](http://www.svt.de)

Signed for and on behalf of the manufacturer by:

p.p. Christian Meyer-Korte  
Head of Product Management / Private Label

p.p. Andree Schober  
Head of chemical department
